

Dear students,

Digi-X is opening up applications to students who are interested in doing a summer internship with them! As the startup and venture building arm of Digi Telecommunications, they develop and scale new digital businesses beyond the telco industry.

They are currently on the lookout for summer interns to join the team for the 2020 Summer break!

In Digi-X, there are two types of internship roles:

- **Business** - Help manage Digi-X's digital businesses by continuously identifying new or improved ways to enhance and maintain consistent growth.
- **Technology** - Work closely with our dedicated engineering team, and put your frontend/backend programming skills to use on a daily basis.

The internship programme at Digi-X focuses on practical learning experiences alongside collaborative side projects where interns get to take on real business challenges as a group, as well as a series of informative learning modules crafted out just for their interns!

If you are fascinated by the innovation and digital industry in Malaysia, this is definitely an engaging and fun internship experience you won't want to miss.
